

The DLC Difference

Water Management Done Right

DLC is the right choice for your Community because we know how to optimize your irrigation system and save you money. Check out the story below to see how much we saved one Community.

We were the landscape management provider at a Community in the southeast valley between 2003 and 2006. During those years, the irrigation water cost averaged approximately \$143,000 per year. In 2007, the Community decided to hire a new landscape provider whose monthly fee was 2% lower. The Community's water bill went up

42%!

The same Community hired a new landscape provider in 2009. The water bills did not go down.

In May 2010, DLC was hired back as the landscape management provider with the expectation that we would lower their water cost and improve the quality of their turf and plants. After only 9 months, we saved the Community

\$75,657

and improved the quality of the common areas to give the residents a better landscape experience. We didn't stop there. Into 2012, we continue to save the Community an average of **\$53,309** and **13.2 million** gallons of water each year, even with a water rate increase. That's an average savings of **27%** over their previous landscape management provider.

Our Irrigation Technicians constantly monitor plant and turf health and adjust runtimes accordingly. Even "smart" controllers need weekly management.

Water Watchers

We know our water, all

2 billion gallons

of it we manage annually.
